

ecocare ACTIVATOR

About Insight Environmental

Insight Environmental aims to make every wastewater and effluent treatment system in Australia healthy and sustainable. We do this by consulting and working with householders, business and industry and providing our unique environmentally responsible product solutions

What is Ecocare Activator?

Ecocare Activator is a multifunctional product formulated to provide a comprehensive solution to the interrelated issues of **waste management, odour control** and **cleaning**.

Ecocare Activator is a blend of natural ingredients and biological stimulants that combine to kill odours on contact, cut through grease, fat and grime, break down solids and condition and maintain a healthy bacterial balance - ensuring the effective and efficient breakdown of waste.

Why use Ecocare Activator?

Using **Ecocare Activator** has many benefits including

- restores system efficiency and prevents future problems
- destroys odours at the source and prevents from returning
- dissolves blockages
- reduction of BOD's and suspended solids
- reduces system maintenance
- compensates for use of harsh chemicals and sanitizers
- cleaning capabilities enhance not hinder performance of waste systems.
- cost effective
- non toxic and biodegradable
- quick and easy application
- creates a safe, healthy environment
- Australian made

Where is Ecocare Activator used?

Ecocare Activator is used to treat waste issues in

- septic and on-site treatment systems (AWTS)
- domestic grease traps and greywater systems
- rubble/leach drains and trenches
- wastewater treatment plants
- sewer pump stations
- irrigation lines
- effluent ponds

What can you use Ecocare Activator for?

Ecocare Activator is extremely useful and effective at

- odour control
- waste breakdown
- general cleaning
- commercial cleaning (AQIS approved for food processing)

Common area Ecocare Activator is used and why

Wastewater Treatment Systems

When a wastewater treatment system can no-longer cope with the effluent flowing into the system, the first symptom is usually noxious odour which may have been absent or barely noticeable previously. This indicates that the community of microbes responsible for the orderly and efficient breakdown of waste has been damaged and become out of balance. If left untreated the situation may lead to blockages and out of specification discharges.

Ecocare Activator stimulates the bacterial activity in the waste system and restores the proper balance. This leads to an increased rate of waste consumption and elimination of odours.

Packaging Options

Ecocare Activator is supplied as a liquid concentrate in 5, 10, 20 or 200 litre containers.

Dosage rates are dependent on a number of factors. We will advise you of the quantities required for your particular situation and provide tailored instructions.
